The Securities which are so purchased and refused to be transferred in the name of the Client or the Portfolio Manager by the Company or Corporation concerned, may be sold by the Portfolio Manager, at the available market rate, at the risk and responsibility of the Client concerned.
- 1.3 The Client shall not question any of the acts, deeds, omissions or commissions or things done or performed by the Portfolio Manager under this agreement and the Portfolio Manager shall fulfill its duties and obligations, at its absolute discretion,

without interference from the Client, his/her/its attorney (s) or authorised agent (s).

2. Risk Factors in relations to Securities Investments.

2.1 Risk associated with Equity and Equity Related Securities:

Equity and Equity Related Securities by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Securities may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the Value of the Client Portfolio may be adversely affected.

Further, the Equity and Equity Related Securities are risk capital and are subordinate in the right of payment to other securities, including debt securities

Equity and Equity Related Securities listed on the stock exchange carry lower liquidity risk, however the Portfolio Manager's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases,

settlement periods may be extended significantly by unforeseen circumstances. The inability of the Portfolio Manager to make intended securities purchases due to settlement problems could cause the Client to miss certain investment opportunities. Similarly, the inability to sell securities held in the Portfolio may result, at times, in potential losses to the Portfolio, should there be a subsequent decline in the value of securities held in the Client's portfolio.

The Portfolio Manager may invest in securities which are not listed on the stock exchanges. These securities may be illiquid in nature and carry a higher amount of liquidity risk, in comparison to securities that are listed on the stock exchanges or offer other exit options to the investor. The liquidity and valuation of the investments held in Portfolio, due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

2.2 Risk associated with Fixed Income and Money Market Securities:

Interest - Rate Risk

Fixed Income and Money Market Securities run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. In case of floating rate securities, an additional risk could arise because of the changes in the spreads of floating rate securities. With the increase in the spread of floating rate securities, the price can fall and with decrease in spread of floating rate securities, the prices can rise.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. Fixed Income and Money Market Securities are subject to credit risk.

Lower rated or unrated securities are more likely to react to developments affecting the market and credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.

Liquidity or Marketability Risk

The ability of the Portfolio Manager to execute sale/purchase order is dependent on the liquidity or marketability. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

Re-investment Risk

This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Portfolio Manager including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

2.3 Risks associated with Investing in Derivatives

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Portfolio Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Portfolio Manager involve uncertainty and decision of Portfolio Manager may not

always be profitable. No assurance can be given that the Portfolio Manager will be able to identify or execute such strategies.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Portfolio Manager may not be able to sell or purchase derivative quickly enough at a fair price.

2.4 Risks associated with Investing in Securitised Debt

Securitised debt may suffer losses in the event of delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. Securitised debt are subject to interest-rate risk, prepayment risk, credit or default risk.

Further, Asset Backed Security (ABS) has structure risk due to a unique characteristic known as early amortization or early payout risk.

2.5 Risks associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Portfolio Manager and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Portfolio Manager may not be able to sell such lent securities and this can lead to temporary illiquidity.

2.6 Risks associated with investments in Mutual Funds:

The Portfolios may invest in schemes of Mutual Funds. Hence scheme specific risk factors of each such underlying scheme will be applicable to the portfolios.

2.7 Structured Products / Capital Protection Portfolios:

The Portfolios may invest in securities linked to index(es) and/ or underlying stocks or commodities and this could result in negligible returns or no returns over the entire tenor or part thereof of the Portfolio. Further, at any time during the tenor of the Portfolio, value of the Portfolio may be substantially less than the actual value of the Portfolio at the end of tenor. Further, the Portfolio and the return and/or maturity proceeds of the Portfolio thereon, are not guaranteed or insured in any manner by any entity. In case of occurrence of any event caused by a Force Majeure, the Portfolio may be liquidated at a date much before the tenor of the Portfolio at a fair value.

Portfolios investing in debentures linked to silver/ gold may be affected by the prices of silver/ gold. The prices of silver/ gold may be affected by several factors such as demand and supply in India and in the global market, change in political, economical environment and government policy, inflation trends, currency exchange rates, interest rates, perceived trends in bullion prices, restrictions on the movement/trade of gold by RBI, GOI or by the country importing/ exporting silver/ gold in/ out of India etc.

2.8 The investment according to investment objective of a Portfolio may result in concentration of investments in a specific security / sector/ issuer, which may expose the Portfolio to risk arising out of non diversification. Further, the portfolio with investment objective to invest in a specific sector / industry would be exposed to risk associated with such sector / industry and its performance will be dependent on performance of such sector / industry.

I hereby acknowledge that I have received and understood this risk disclosures.
